YISHUN SECONDARY SCHOOL Subject & Code: <u>Design & Technology</u> Level & Stream: <u>Secondary 1 Express/Normal Academic/Normal Technical</u>

The Curric	ulum and Approaches to Learning	Key Programmes / Competitions	
 In line with the requirements of the Design and Technology (D&T) Lower Sec 2017 Syllabus, the teaching of D&T at YSS focuses on educating students as persons through the development of cognitive skills and abilities unique in the field of design. D&T education aims to nurture in the students a way of thinking and doing, dispositions that are inherent in design practices: Embracing uncertainties and complexities Be cognizant of and resolve real-world, ill-defined problems Relentless drive to seek out how things work Use of doodling and sketching, and 3D manipulation of resistant materials as a language for visualisation, communication and presentation 		<u>Competition</u> - Internal school competition	
Term	Learning Experiences (chapter, activity)	Learning Outcomes & Assessment	
1	 Learning through mini project (handphone holder) Students will go through a teacher-guided mini project, where the design specifications and the dimensions of the acrylic material will be given: be aware of safety rules, processes, procedures in the workshop, and properties of plastic material plan and monitor own progress using a flow chart conduct basic research (find out the dimensions of different handphones) and use this information in the design of the handphone holder design and make an acrylic handphone holder using tools and machines (hand-eye coordination, learn to follow verbal and written instructions) use lines and curves to generate random shapes (a simple creative ideation technique) critique design ideas and selection of idea suitable for the intent understand basics of working drawing 	 Learning Outcomes Empathy & Safety consciousness Basic research skills Free-hand sketching skills [2D sketches, conversion from 2D to 3D drawings, idea generation skills] Knowledge and understanding of plastic material (acrylic) 3D manipulation [handling acrylic material] Evaluation of completed prototype against design specifications Testing of prototype Reflection of learning process and areas for improvement Weighted Assessment 1 Skill-based project (handphone holder) 	
2	 Learning through mini project (EZ-link card holder) Students will go through a teacher-guided mini project, where the design specifications and the dimensions of the acrylic material will be given but they will come up with the design using random line trigger ideation technique: be aware of safety rules, processes, procedures in the workshop, and properties of plastic material plan and monitor own progress using a flow chart 	Learning Outcomes - Empathy & Safety consciousness - Basic research skills - Free-hand sketching skills [2D sketches, conversion from 2D to 3D drawings (oblique, isometric), idea generation skills]	

	- design and make an EZ-link card holder using tools	- Knowledge and
	and machines (hand-eye coordination, learn to follow	understanding of
	verbal and written instructions)	mechanisms, structures,
	 use lines and curves to generate random 	recyclable materials
	shapes (a simple creative ideation technique)	- 3D manipulation [quick
	 critique design ideas and selection of idea 	mock-ups and on handling
	suitable for the intent	recyclable materials]
	Learning through mini project (mechanical toy using	Weighted Assessment 2
	recyclable materials)	 Task (3D sketching)
	Students will go through a teacher-guided mini project, where a theme, the design brief and some design	
	specifications will be given:	
	- be aware of safety rules, processes, procedures in the	
	workshop, and properties of recyclable materials	
	 plan and monitor own progress using a flow chart 	
	 learn about different types of mechanisms and choose a suitable mechanism(s) to implement in mechanical 	
	toy project learn about structures and how to reinforce structure 	
	within the project to ensure stability	
	- conduct basic research (find different types of	
	automata and different designs) and use this	
	information in the design of the mechanical toy	
	 design and make a mechanical toy using tools and 	
	machines (hand-eye coordination, learn to follow	
	verbal and written instructions)	
	 use shape borrowing technique to generate ideas 	
	 present the final idea through rendering
